

JT COVER

 **CleanCoverConcept**

The Clean Cover Concept The safe cover system for open clarifying basins

**90% less odour emission
99% less algae formation**

THERE IS SOMETHING IN THE AIR...

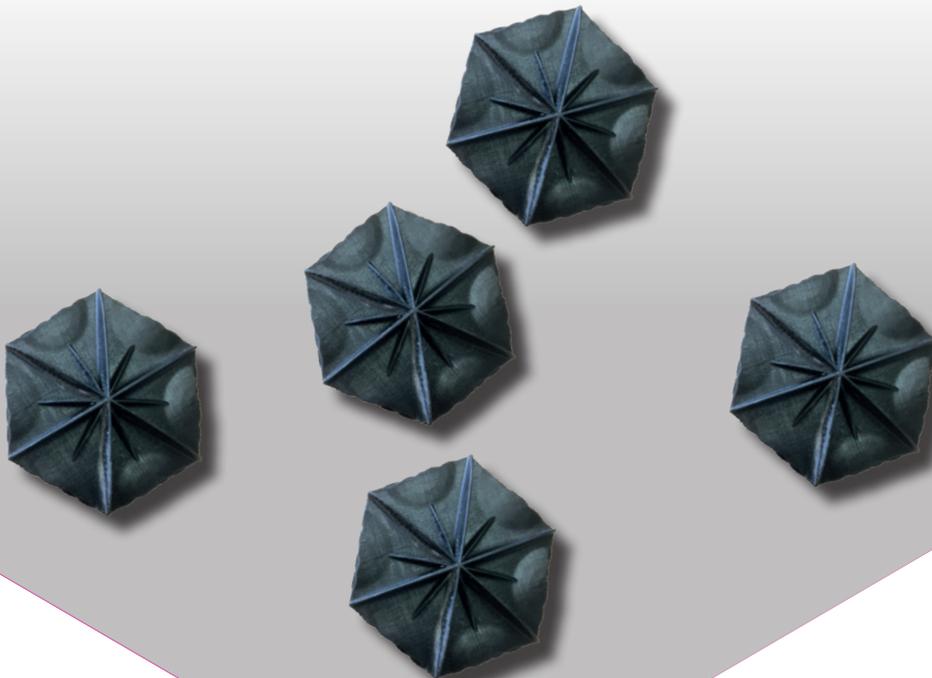

Uncovered clarifying basins – a lot of stench, trouble with neighbours and the environment.

These times are over: the Clean Cover Concept reduces odour emission up to 90%!

And this in a particularly simple, quick and economical way: without static load on the basin and approved construction measures.

Because the JT Cover elements automatically spread on the surface and then float together thereby establishing a tight cover.

**The Clean Cover Highlight:
The air is clean!**

JT Cover

Elements: legally protected
Size: diameter 313 mm
Material: recycled plastic, black,
UV protected

The Clean Cover Concept

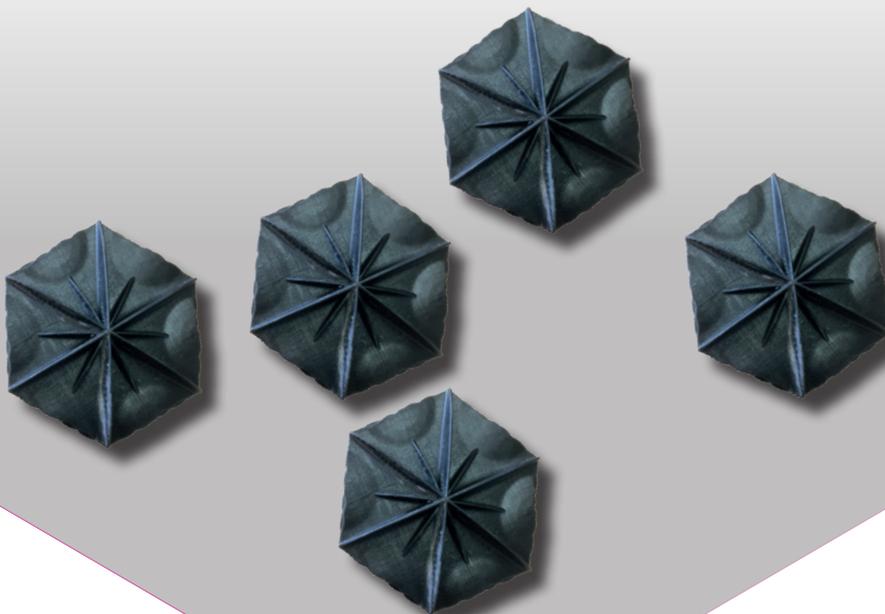

Required: 14.5 covers per m²
Delivery: in big bags

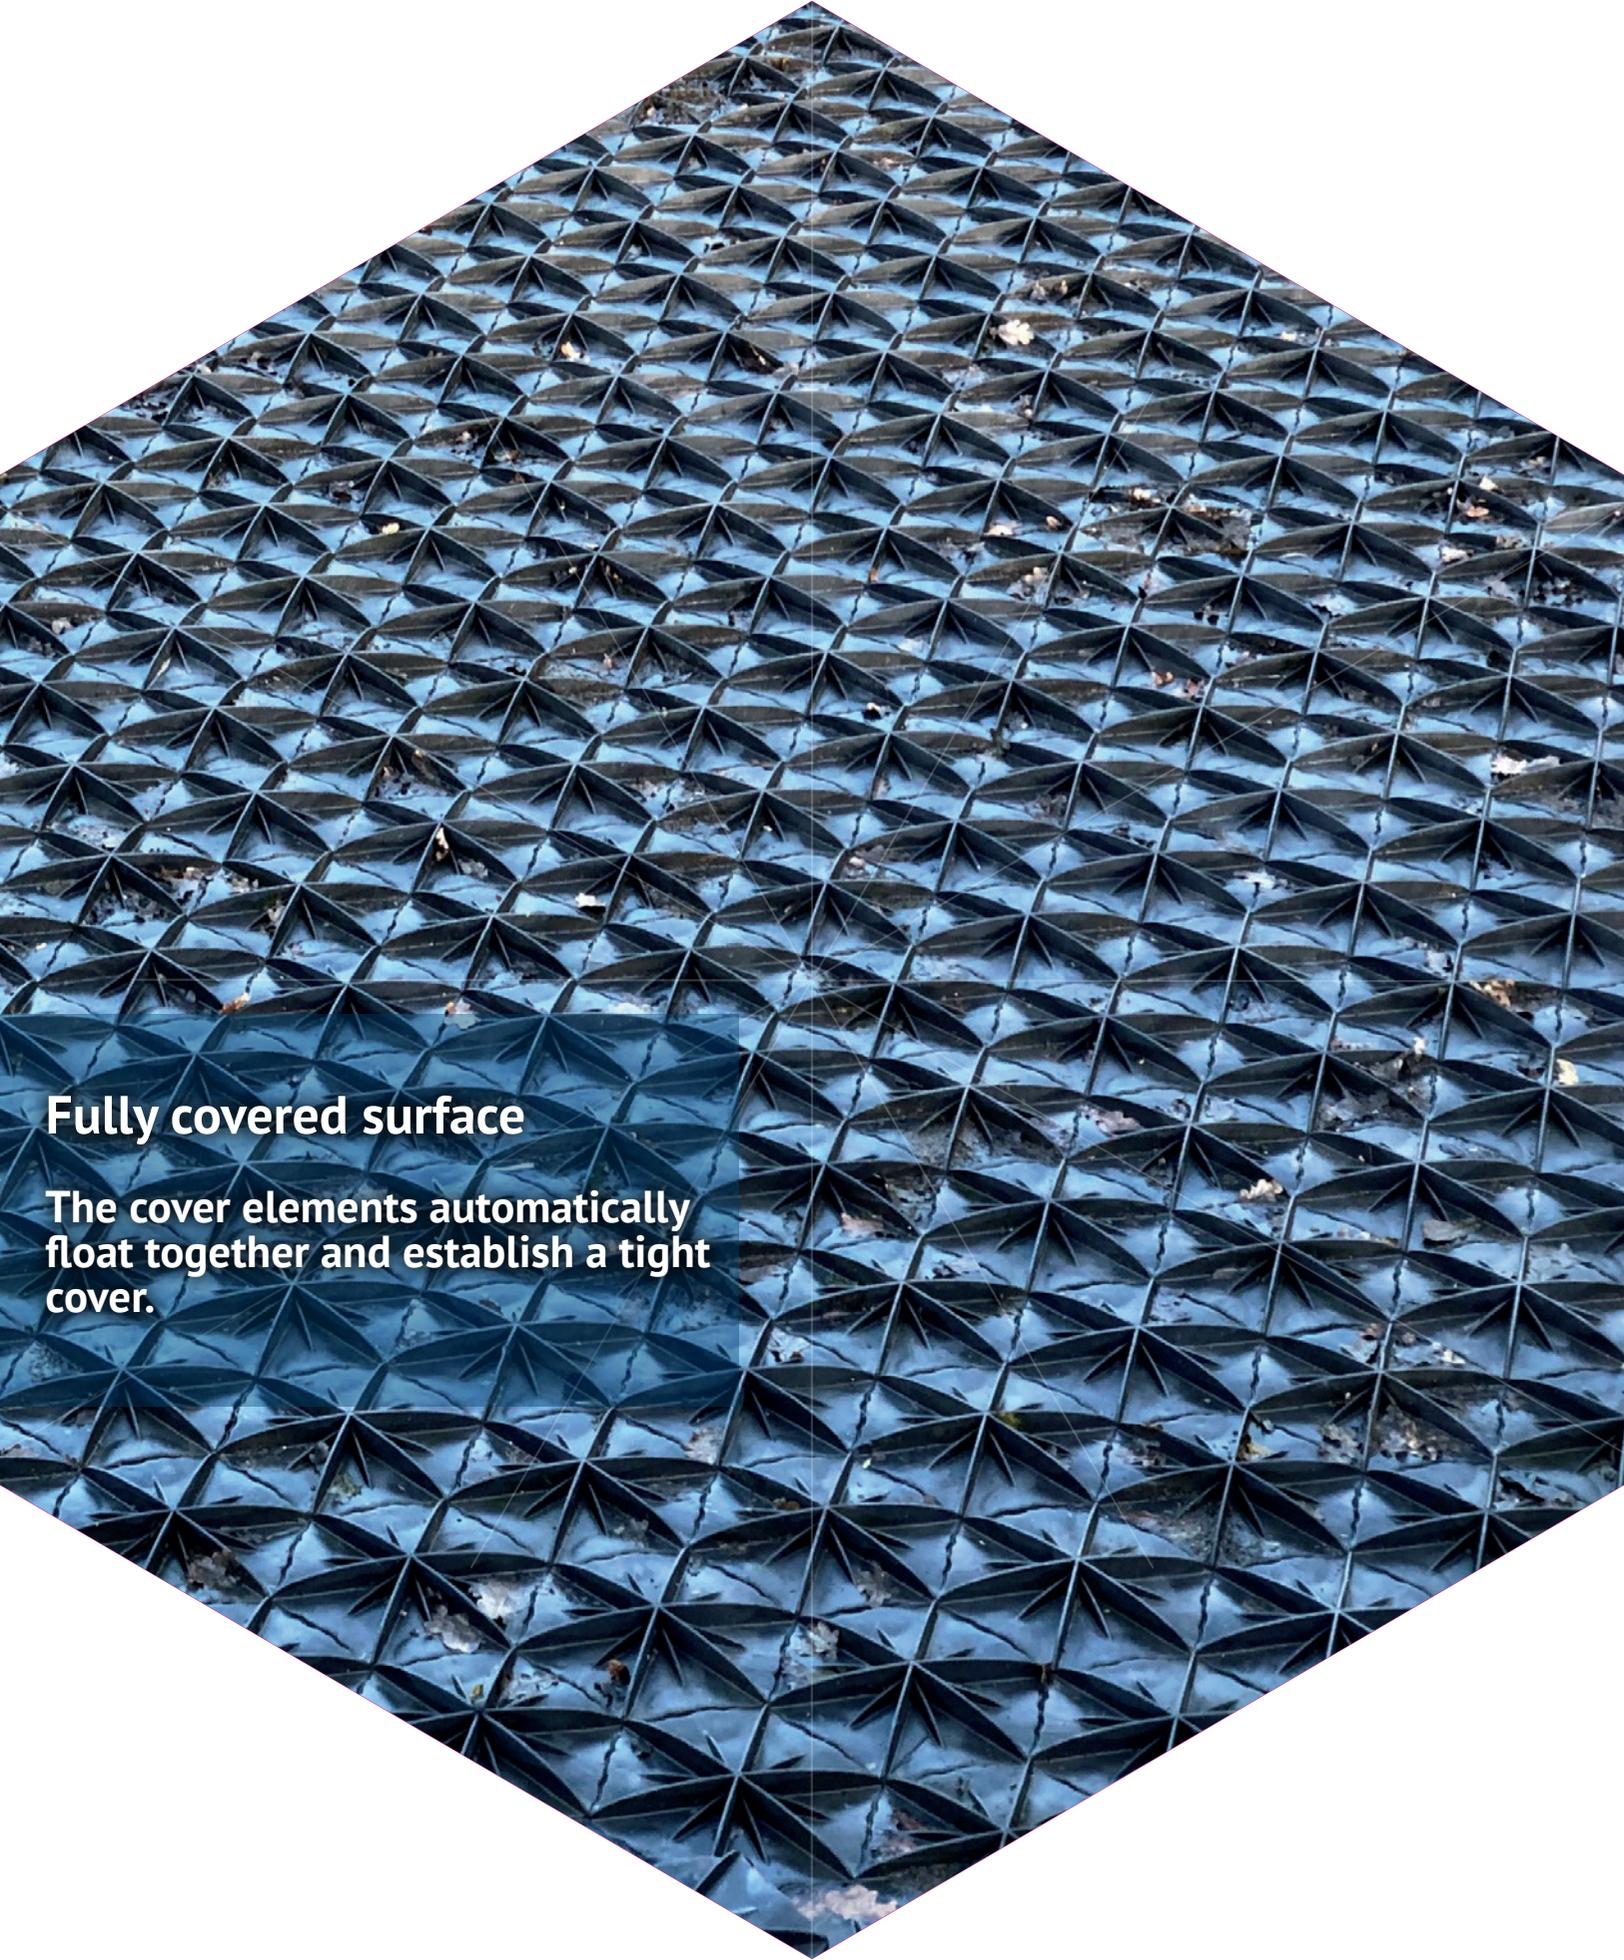

90% ODOUR REDUCTION
99% LESS ALGAE FORMATION
100% environment-friendly

The Clean Cover Concept closes the surface of your open clarifying basin almost 100%, and at the same time it ensures massive reduction: up to 90% less odour emission – 99% less algae formation.

JT Cover elements are 100% environment-friendly: they work without expenditure on energy, and they are made entirely of recycled plastic. The material is practically indestructible and can be used for at least 25 years.

The Clean Cover Check:
Experience the results of this successful system!

Fully covered surface

The cover elements automatically float together and establish a tight cover.

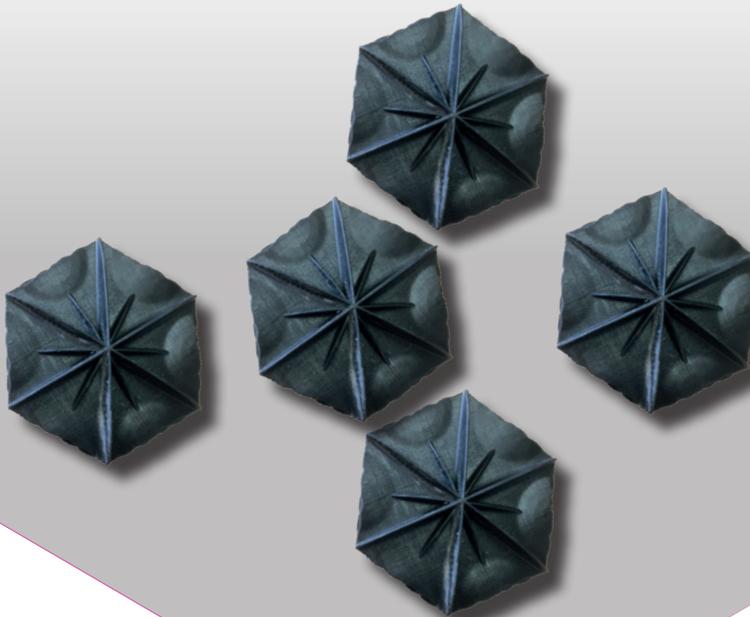

CLEAN COVERS DIRECTLY FROM THE BAG:

From the big bag directly onto the surface

Quick and easy: Just drop the UV protected Clean Cover elements from the big bag directly into the reservoir or into the clarifying basin.

The clever construction ensures that the Clean Cover elements will spread on the surface, and then float and fit together like a puzzle, thereby establishing a tight and flexible cover.

The Clean Cover Construction:
Your complete solution - once and for all!

A large white bulk bag with blue lifting straps is suspended from a dark metal beam. The bag is wrinkled and appears to be made of a heavy-duty material. The background is a grey, overcast sky. In the lower part of the image, a building with a corrugated metal roof and a concrete wall is visible.

**Simply from the big bag
directly onto the surface**

**The cover elements automatically
float together and prevent odour
emission.**

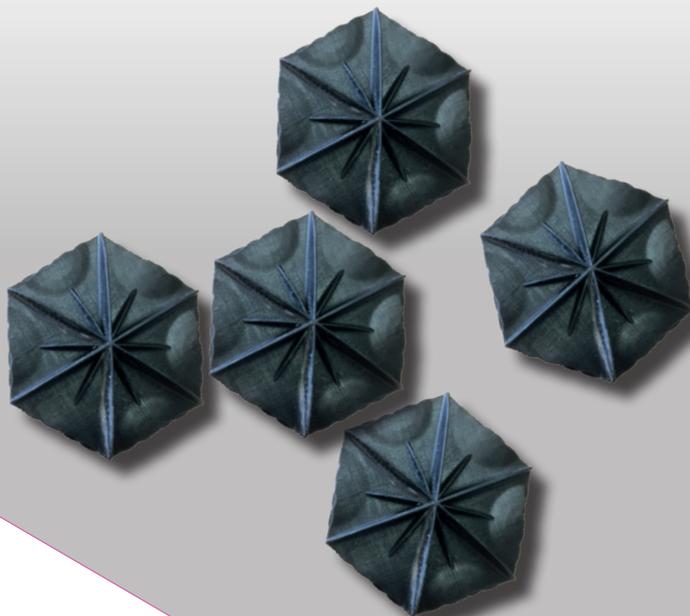

BELOW THE WATER SURFACE: STIRING, PUMPING, SUCKING

Above the water surface: no unpleasant smell

Exactly that is the Clean Cover Highlight: JT Cover elements always stay on top and cannot dive. If an agitator is used below the water surface in the reservoir or in the clarifying basin, the covers remain on the surface and automatically form a tight cover again when the stirring has ended.

Thanks to the diameter of 313 mm, the covers are no obstacles for 25 cm drains and pumps: they simply slide aside - smooth and safe.

Clean Cover Competence:
Developed and manufactured by specialists for
the prevention of odour emission

**Water intake or water outlet to
or from the clarifying basin -
the covers always keep the surface
closed.**

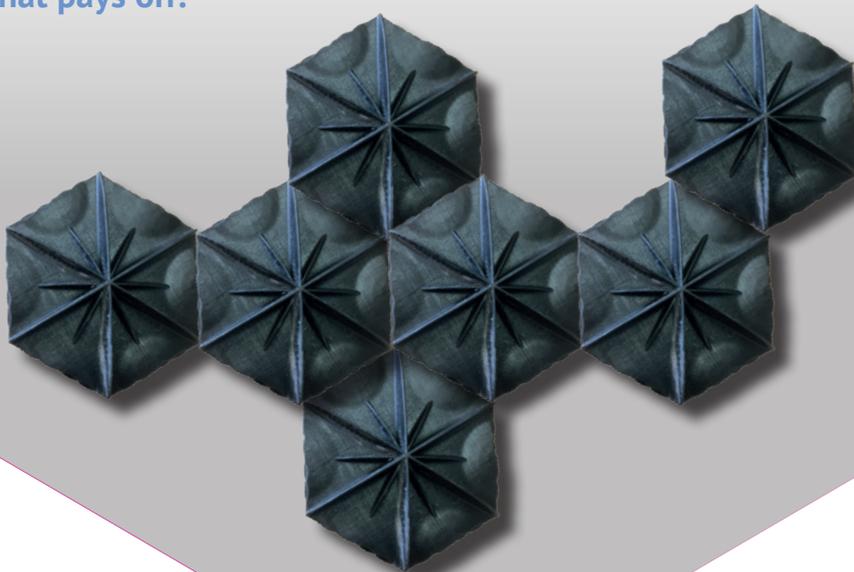

NO MAINTAINANCE, NO OPERATING COSTS

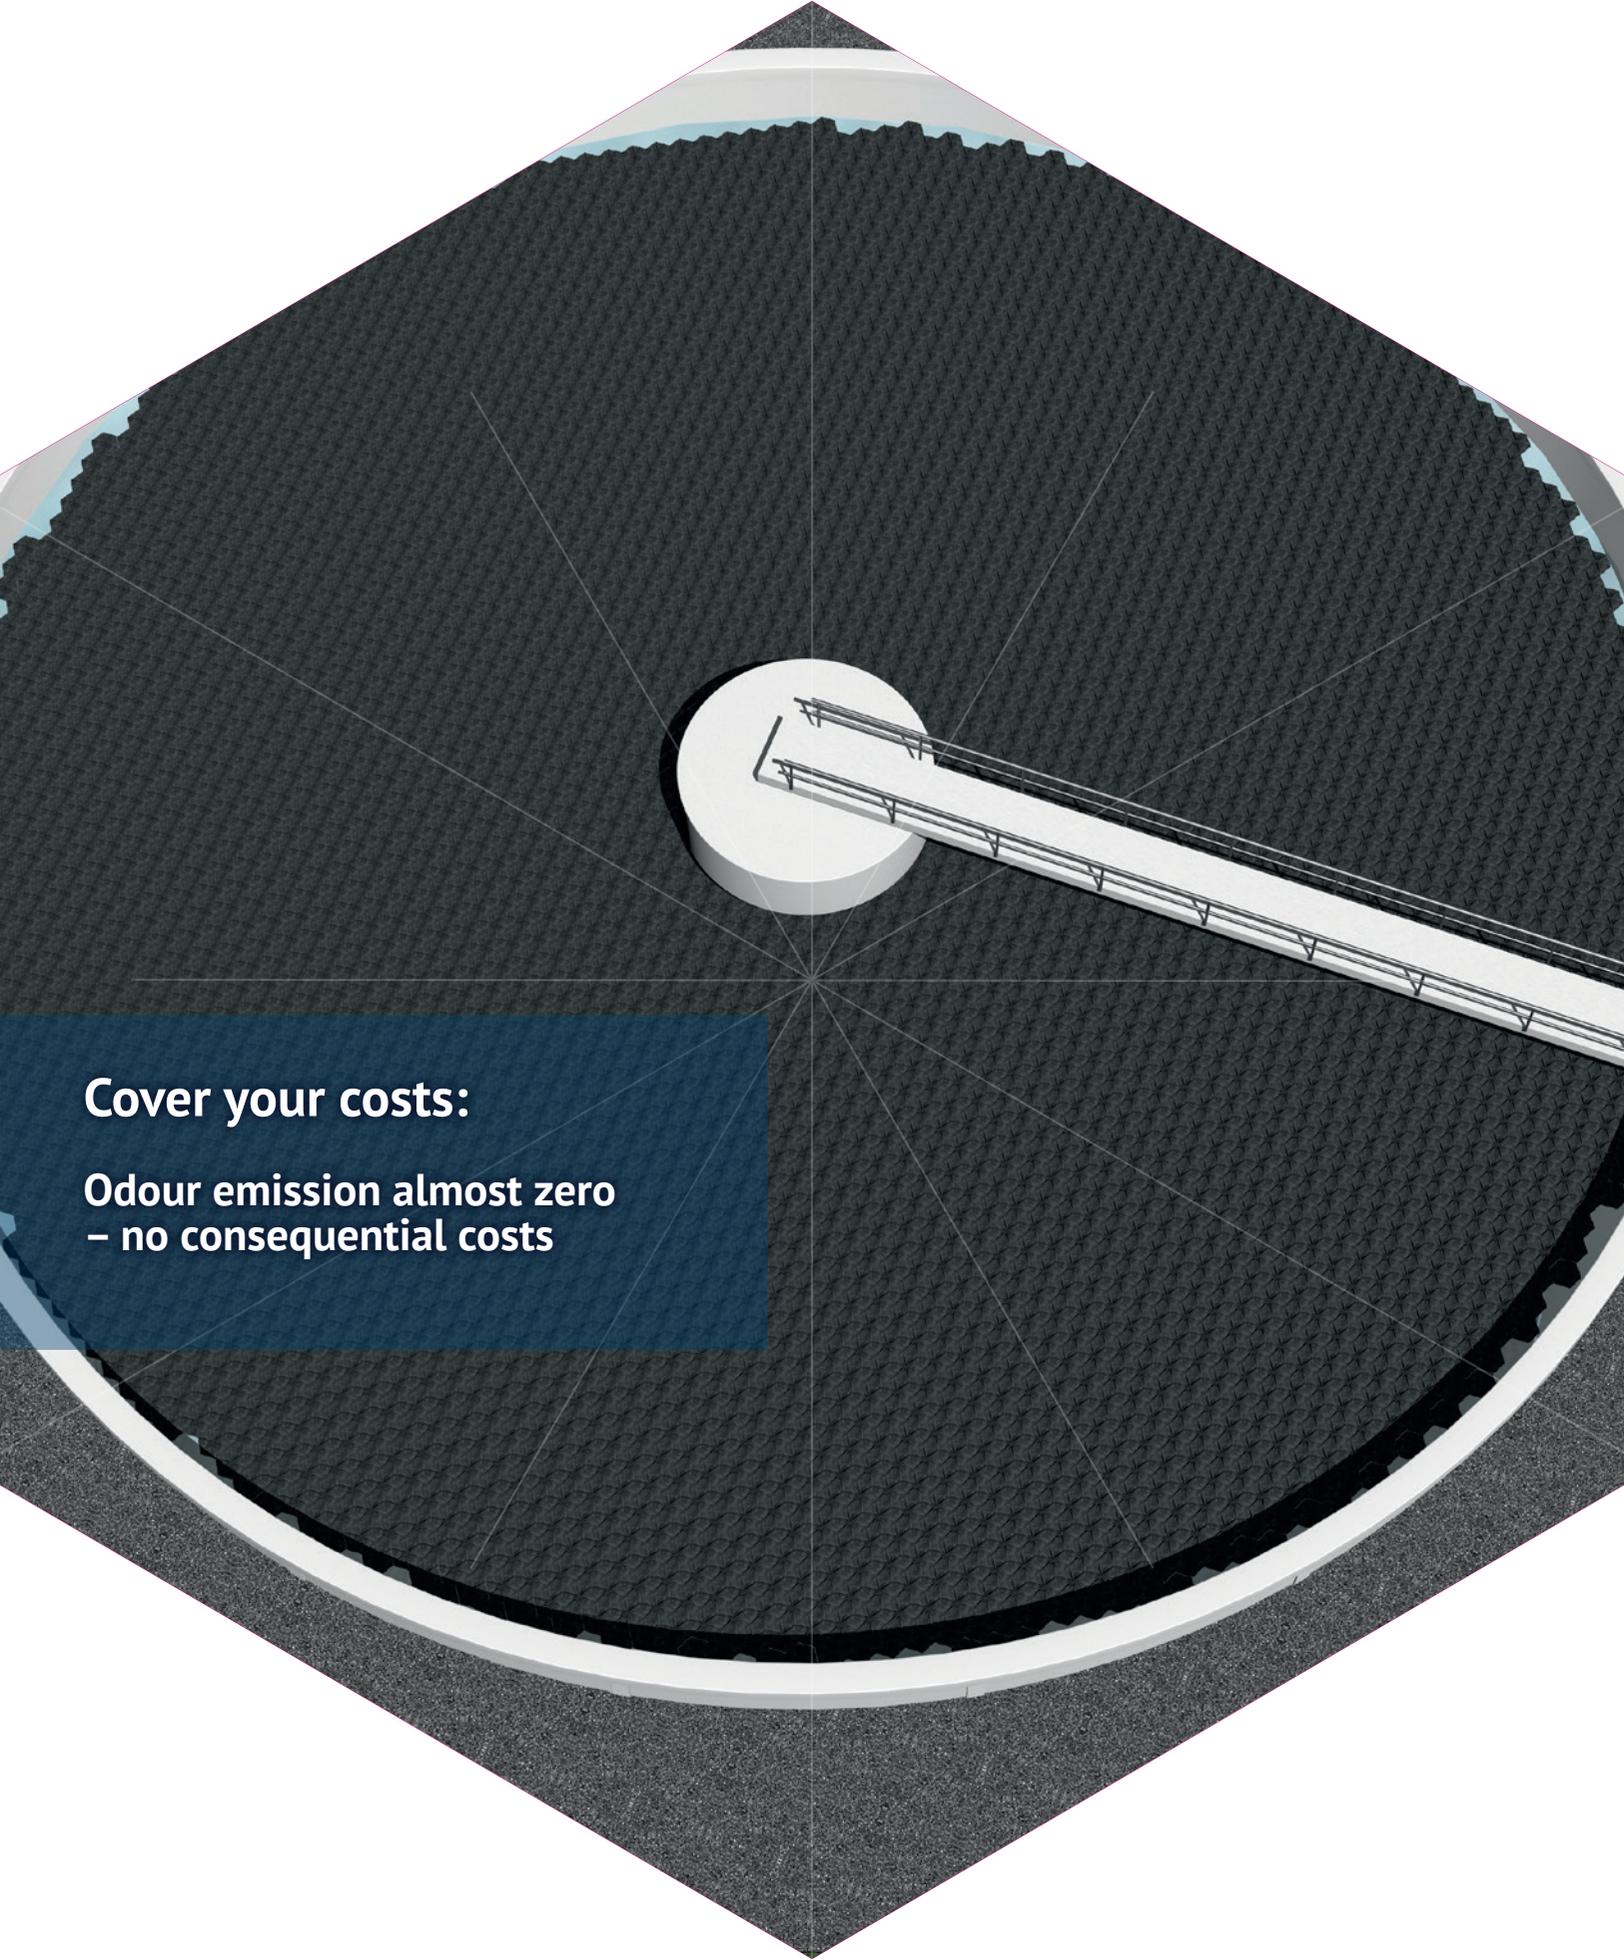

The instant solution which lasts for 25 years at least.

Those who are familiar with the challenges and requirements of the waste water industry can develop and implement professional solutions. The developers and manufacturers of the Clean Cover Concept are experienced and qualified experts in the areas water, soil and air, and they know what is going on.

Optimal function and convincing economy ensured by the JT Cover system easily and permanently meet the constantly growing requirements for the environment. With the Clean Cover Concept you are always safe - you can use additional covers at any time when expanding or remove elements on smaller surfaces. And the minimum lifespan of 25 years speaks for itself.

**The Clean Cover Construction:
A system that pays off!**

Cover your costs:

**Odour emission almost zero
– no consequential costs**

YOU CANNOT ELIMINATE THE TOPIC OF ODOUR EMISSION

But you can remove unpleasant smell from the air

Developed and manufactured in Denmark - unsurpassed in quality, durability and environmental friendliness. There is a reason why the Danish environmental technology is considered exemplary – with the Clean Cover Concept you meet the highest international standards. Scientifically proven: up to 90% less odour emission – 99% less algae formation. And who would value these features more than you?
